You'll be able to see the previous revision of your drawing and compare it with the current revision. AutoCAD 2017 includes the ability to draw pipes (i.e., shapes with two-dimensional characteristics). You can create pipes in your drawings by selecting the proper preset or you can create a custom pipe. AutoCAD 2017 is also the first release of the software to support 3D drafting. By using the AutoCAD 3D

The lack of correlations between light curves and their spectra implies that these two aspects of the supernovae are generated by separate physical processes. The majority of supernovae show remarkable correlations between the velocity gradient and the radial velocity of the ejecta. The origin of these correlations is uncertain, but their existence makes it difficult to use the velocity gradient to date the supernovae. We report on a study of the radial velocity distribution of 36 luminous type Ia supernovae from the Hubble Space Telescope and the ESO VLT. We show that the velocity gradient is not correlated with the velocity of the core of the ejecta, and we derive a range for the ages of the supernovae from 0.25 to 1.25 Gyr. The width of the radial velocity distribution, the bulk and random velocity, are also examined. We find no correlations between any of these parameters and velocity gradient, age or redshift. The random velocity of the supernova increases with age. This may be due to the supernova becoming more spherical, which results in a decrease of the random velocity.' author: - 'H. Leir, R. L. M.
