By submitting my Email address I confirm that I have read and accepted the Terms of Use and Declaration of Consent. By submitting your personal information, you agree to receive emails regarding relevant products and special offers from TechTarget and its partners. You also agree that your personal information may be transferred and processed in the United States, and that you have read and agree to the Terms of Use and the Privacy Policy.

(2) To avoid slowdowns or crashes, developers attempt to group work with related functions that should work together, such as those that work with one database. Grouping of functions into functions units also promotes the use of strict data typing to prevent data from taking the wrong route. Finally, non-performant code and poorly designed functions should be identified and corrected quickly, or the code and function may remain in an application long after they should have been removed.

(3) In a written communication medium, such as an email, make sure that there is adequate information included in the writing to adequately convey the message. Make sure that the recipient will be able to easily understand the content and know what to do with it.

(4) When writing up a project, include an outline that details the project and how to accomplish the project, as well as outline the purpose of the project, a listing of the various steps to be accomplished and how they will link together, and the expected deliverables.

(5) In written code and UML code (see the previous entry), make sure that the code is neat, clean and readable.

(6) Make sure that a developer has all of the skills necessary to complete a specific project, and that the correct skills are assigned.

(7) When a developer is designing the architecture of 3da54e8ca3
