New Features, Improvements, and Change Notices in AutoCAD 2023. Create and edit a file with multiple objects. In AutoCAD, you can create several objects within a single drawing file by selecting the "Save as" option from the "File" menu. AutoCAD saves each object to a separate file. This new feature can help you create different objects that each use a different set of coordinate systems, such as north, east, and vertical. For example, you can create a drawing with north and east grids and then add a scale-form object to an existing drawing. Drafting & Data Management: Select and show design intent with the new design intent indicators. The drawing design intent indicators now automatically show up at the top of the drawing window. You can select any one of the design intent indicators and display it at the top of the drawing window. For example, you can set the front side elevation indicator to always display, to show only in the viewports, or to show only when you select the "examine" command. The new design intent indicators are: All: Show the design intent indicator for all objects in the drawing. (Also called Full) Selected: Show the design intent indicator for the selected object. Current view: Show the design intent indicator for the current
