creating geometric objects: blocks, splines, paths, lines, circles, quadratic and cubic curves, arcs, 3D construction elements, shells and solid objects. Tools for creating annotations: text, dimensions, coordinate systems, datums, arcs, notes, graphic objects and external references. Tools for creating primitives: hyperlinks, keyframes, objects, groups, backgrounds and linetypes. Tools for creating geospatial: rasters, feature families, point shapefiles, linestrings, polygons and multipatch geometries. Tools for managing drawings and graphics: select multiple, copy, paste, move, save, rename, label, export, import and arrange multiple drawings and graphics. Animations AutoCAD offers very extensive editing and animation tools. Some of the editing tools include: The Batch box, enables the user to execute a series of drawing commands on a selection of objects. The Command shelf, enables the user to execute a series of commands on individual objects.
